A scatter plot showing the relationship between `asym_usl` (x-axis) and `asym_usl` (y-axis). The data points form a strong positive linear correlation, following the diagonal line $y = x$. The color of the points indicates a third variable, with a color bar on the right ranging from 0 (dark blue) to 60 (yellow). The points are colored according to this scale, showing a gradient from blue at the bottom-left to yellow at the top-right.
