The figure is a scatter plot titled "asym\_dsl". The x-axis is labeled "asym" and the y-axis is labeled "dsl". Both axes have a range from -0.0015 to 0.0015, with major tick marks at intervals of 0.0005. A diagonal line of data points runs from the bottom-left to the top-right. The points are colored based on a scale from 0 to 500, with a color bar on the right side of the plot. The color scale ranges from dark blue (0) to yellow (500), with intermediate colors representing values of 100, 200, 300, and 400. The data points are most densely packed along the diagonal line, with the color of the points increasing as they move away from the origin.

The plot shows a strong positive linear correlation between 'asym' and 'usr'. The data points are colored based on a scale from 0 to 500. The color scale is represented by a vertical bar on the right side of the plot, ranging from dark blue (0) to yellow (500). The points are most densely packed and colored yellow (high value) in the upper right quadrant, indicating higher values for both 'asym' and 'usr'.
