The figure consists of five scatter plots arranged horizontally, each showing the distribution of differences in BPM coordinates for a specific beam parameter. The plots are titled: **diff_bpm1X**, **diff_bpm4aY**, **diff_bpm4eX**, **diff_bpm4eY**, and **diff_bpm12X**. Each plot has a y-axis ranging from -10000 to 10000 and an x-axis ranging from -40 to 30 (for the first four) or -100 to 150 (for the last one). The data points are densely clustered around the origin (0,0), indicating that the differences are small and centered around the origin.
