The figure consists of five scatter plots arranged horizontally, each showing the distribution of differences between two BPM measurements. The y-axis for all plots is labeled 'diff_bpmX' and ranges from -10000 to 10000. The x-axis for each plot is labeled 'diff_bpmY/um' and ranges from -40 to 40 for the first four plots, and -150 to 150 for the fifth plot. The plots are titled 'diff_bpm1X', 'diff_bpm4aY', 'diff_bpm4eX', 'diff_bpm4eY', and 'diff_bpm12X' respectively. Each plot shows a dense, roughly circular cloud of points centered at (0,0), indicating that the differences between the measurements are small and centered around zero.
