The figure consists of five scatter plots arranged in a single row, each showing the difference between two different beam position monitor (BPM) measurements. The plots are titled as follows:

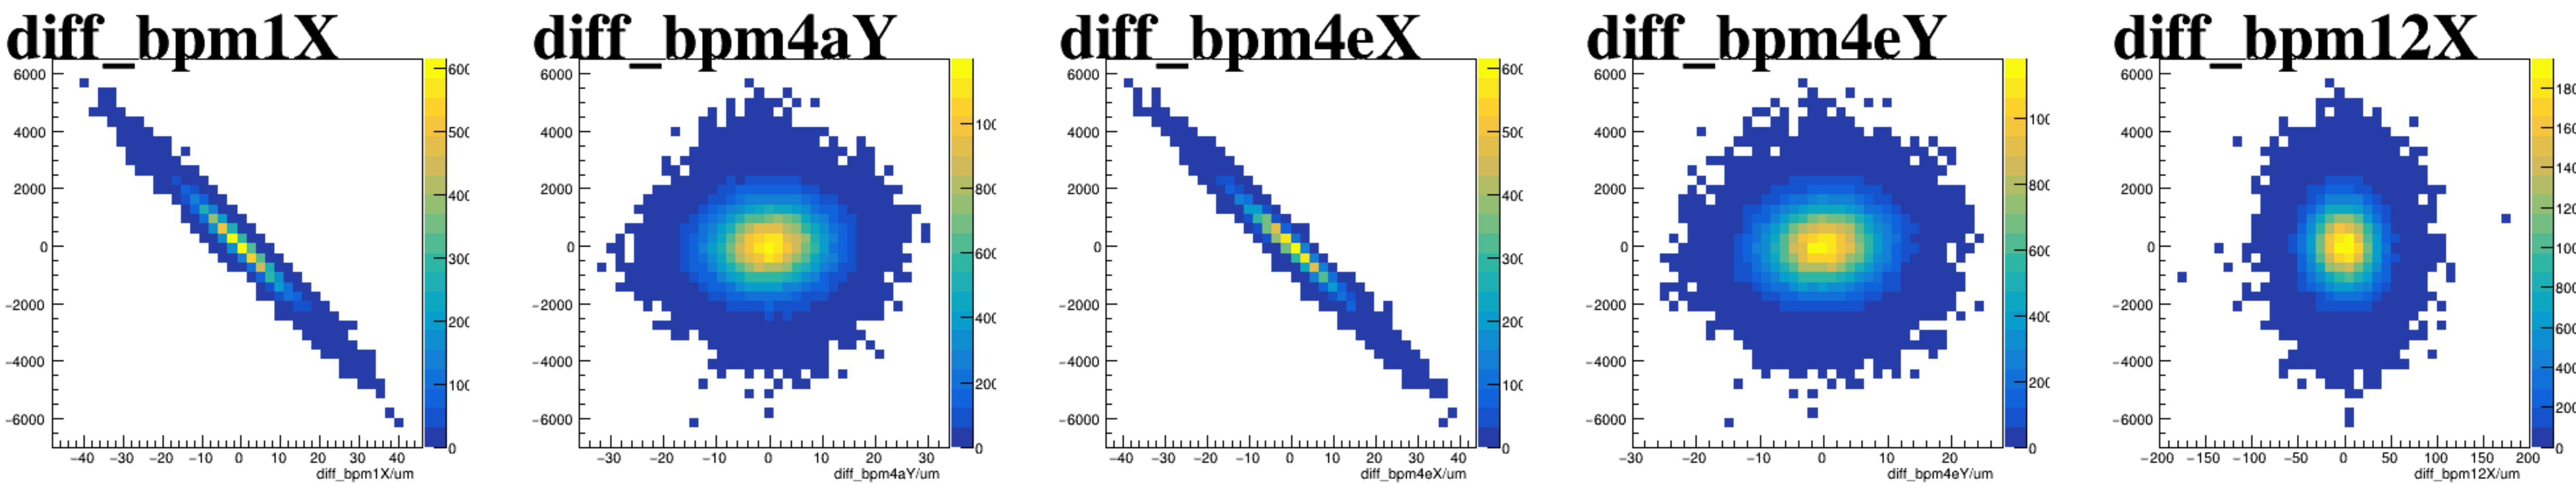

- diff_bpm1X**: The y-axis is labeled 'diff_bpm1X' and ranges from -200 to 200. The x-axis is labeled 'diff_bpm1X' and ranges from -40 to 40.
- diff_bpm4aY**: The y-axis is labeled 'diff_bpm4aY' and ranges from -200 to 200. The x-axis is labeled 'diff_bpm4aY' and ranges from -30 to 30.
- diff_bpm4eX**: The y-axis is labeled 'diff_bpm4eX' and ranges from -200 to 200. The x-axis is labeled 'diff_bpm4eX' and ranges from -30 to 40.
- diff_bpm4eY**: The y-axis is labeled 'diff_bpm4eY' and ranges from -200 to 200. The x-axis is labeled 'diff_bpm4eY' and ranges from -30 to 20.
- diff_bpm12X**: The y-axis is labeled 'diff_bpm12X' and ranges from -200 to 200. The x-axis is labeled 'diff_bpm12X' and ranges from -200 to 200.

Each plot shows a dense, roughly circular cloud of points centered around the origin (0,0), indicating that the differences between the measurements are small and centered around zero. The axes are labeled with the difference between the two measurements, and the units are in micrometers (um).
