The figure displays five scatter plots, each representing a different regression model and variable. The y-axis for all plots is 'regression_res' (ranging from -20000 to 10000) and the x-axis is 'diff_bpm' (ranging from -80 to 100). The plots are titled as follows:

- diff_bpm1X**: Shows a dense, roughly circular cloud of points centered around (0,0).
- diff_bpm4aY**: Shows a dense, roughly circular cloud of points centered around (0,0).
- diff_bpm4eX**: Shows a dense, roughly circular cloud of points centered around (0,0).
- diff_bpm4eY**: Shows a dense, roughly circular cloud of points centered around (0,0).
- diff_bpm12X**: Shows a dense, roughly circular cloud of points centered around (0,0).
