The figure consists of five scatter plots arranged horizontally, each showing the distribution of differences between two beam position monitors (BPMs). The plots are titled as follows:

- diff_bpm1X**: The y-axis is labeled 'diff_bpm1X' and ranges from -10000 to 10000. The x-axis is labeled 'diff_bpm1X/um' and ranges from -60 to 40.
- diff_bpm4aY**: The y-axis is labeled 'diff_bpm4aY' and ranges from -10000 to 10000. The x-axis is labeled 'diff_bpm4aY/um' and ranges from -30 to 30.
- diff_bpm4eX**: The y-axis is labeled 'diff_bpm4eX' and ranges from -10000 to 10000. The x-axis is labeled 'diff_bpm4eX/um' and ranges from -60 to 40.
- diff_bpm4eY**: The y-axis is labeled 'diff_bpm4eY' and ranges from -10000 to 10000. The x-axis is labeled 'diff_bpm4eY/um' and ranges from -30 to 30.
- diff_bpm12X**: The y-axis is labeled 'diff_bpm12X' and ranges from -10000 to 10000. The x-axis is labeled 'diff_bpm12X/um' and ranges from -200 to 200.

All plots show a dense, roughly circular cloud of points centered around the origin (0,0), indicating that the differences between the BPMs are generally small and centered around zero.
