The scatter plot, titled "asym_usl", displays the relationship between two variables, "asym" (x-axis) and "usl" (y-axis). Both axes range from -0.008 to 0.008. The data points are plotted along a diagonal line, indicating a strong positive correlation. A color scale on the right side of the plot ranges from 0 (dark blue) to 500 (yellow), with intermediate values at 100, 200, 300, and 400. The data points are concentrated along the diagonal, with a slight increase in density as the values approach zero.

The figure is a scatter plot titled "asym_usr". The x-axis is labeled "asym" and the y-axis is labeled "usr". Both axes range from -0.008 to 0.008 with major ticks every 0.002. A diagonal line of data points is plotted, showing a strong positive correlation. The points are colored according to a scale on the right, ranging from 0 (dark blue) to 50 (yellow). The density of points is highest near the origin and decreases as the magnitude of the values increases.
