The figure consists of five scatter plots arranged horizontally, each showing the difference in beam position measurements (diff_bpm) for a specific beam position (1X, 4aY, 4eX, 4eY, 12X) in micrometers (um). The y-axis for all plots ranges from -1000 to 1000 um, and the x-axis ranges from -80 to 40 um. Each plot shows a dense, roughly circular distribution of points centered around zero difference, indicating high precision and consistency between the two measurement methods.

The figure consists of five scatter plots arranged horizontally, each showing the difference between two measurement methods for a specific coordinate. The y-axis for all plots is labeled 'diff_bpm1' and ranges from -500 to 400. The x-axis labels are partially visible at the bottom of the image.

- diff_bpm1X**: The x-axis is labeled 'diff_bpm1X/um'. The data points are centered around zero difference.
- diff_bpm4aY**: The x-axis is labeled 'diff_bpm4aY/um'. The data points are centered around zero difference.
- diff_bpm4eX**: The x-axis is labeled 'diff_bpm4eX/um'. The data points are centered around zero difference.
- diff_bpm4eY**: The x-axis is labeled 'diff_bpm4eY/um'. The data points are centered around zero difference.
- diff_bpm12X**: The x-axis is labeled 'diff_bpm12X/um'. The data points are centered around zero difference.
