The figure consists of five scatter plots arranged horizontally. Each plot shows the distribution of differences between BPM1 and BPM4a, BPM4e, and BPM12. The y-axis for all plots is labeled 'diff_bpm1X' and ranges from -10000 to 10000. The x-axis labels are 'diff_bpm1X/um', 'diff_bpm4aY/um', 'diff_bpm4eX/um', 'diff_bpm4eY/um', and 'diff_bpm12X/um'. The distributions are roughly circular or elliptical, centered around zero.
