The figure is a scatter plot titled "asym_usl". The x-axis is labeled "asym" and the y-axis is labeled "usl". Both axes range from -0.008 to 0.008 with major tick marks every 0.002. The data points are plotted as small squares, forming a strong positive linear correlation along the diagonal line where y=x. A color bar on the right side of the plot indicates a scale from 0 to 60, with colors transitioning from dark blue at the bottom to yellow at the top. The data points are colored according to this scale, with values increasing as they move away from the origin along the diagonal.

The figure is a scatter plot titled "asym_dsl". The x-axis is labeled "asym" and the y-axis is labeled "dsl". Both axes range from approximately -0.0015 to 0.0015, with major ticks at -0.001, -0.0005, 0, 0.0005, and 0.001. A diagonal line of data points runs from the bottom-left to the top-right. The points are colored according to a scale from 0 to 60, with a color bar on the right side of the plot. The color scale ranges from dark blue (0) to yellow (60). The data points are most densely packed along the diagonal line, suggesting a strong positive correlation between the two variables.
