The figure consists of five scatter plots arranged horizontally, each showing the distribution of a different beam parameter difference. The y-axis for all plots ranges from -10000 to 10000. The x-axis ranges vary: -100 to 100 for diff_bpm1X, -30 to 20 for diff_bpm4aY, -100 to 100 for diff_bpm4eX, -30 to 20 for diff_bpm4eY, and -150 to 150 for diff_bpm12X. All plots show a dense, roughly elliptical cloud of points centered at (0,0).
