The figure consists of five scatter plots arranged horizontally, each showing the distribution of differences between two beam position monitors (BPMs). The y-axis for all plots is labeled 'diff_bpmX' and ranges from -10000 to 10000. The x-axis for all plots is labeled 'diff_bpmX/um'.

- diff_bpm1X**: The x-axis ranges from -80 to 100. The distribution is centered around (0,0) with a width of approximately 40 um.
- diff_bpm4aY**: The x-axis ranges from -30 to 30. The distribution is centered around (0,0) with a width of approximately 20 um.
- diff_bpm4eX**: The x-axis ranges from -80 to 80. The distribution is centered around (0,0) with a width of approximately 40 um.
- diff_bpm4eY**: The x-axis ranges from -30 to 30. The distribution is centered around (0,0) with a width of approximately 20 um.
- diff_bpm12X**: The x-axis ranges from -100 to 150. The distribution is centered around (0,0) with a width of approximately 60 um.
