The figure consists of five scatter plots arranged horizontally, each showing the distribution of a different diffraction order. The y-axis for all plots ranges from -8000 to 8000. The x-axis ranges are: -80 to 40 for **diff_bpm1X**, -30 to 30 for **diff_bpm4aY**, -60 to 40 for **diff_bpm4eX**, -30 to 40 for **diff_bpm4eY**, and -150 to 150 for **diff_bpm12X**. Each plot displays a dense, roughly circular cluster of points centered at the origin (0,0).
