The figure displays five scatter plots, each representing a different variable. The y-axis for all plots ranges from -10000 to 10000. The x-axis ranges are: diff_bpm1X/um (-50 to 150), diff_bpm4aY/um (-30 to 30), diff_bpm4eX/um (-60 to 120), diff_bpm4eY/um (-30 to 30), and diff_bpm12X/um (-150 to 150). The distributions are roughly elliptical and centered around zero.
