The figure consists of five scatter plots arranged horizontally, each showing the distribution of differences between two beam position monitors (BPMs). The plots are titled as follows:

- diff_bpm1X**: The x-axis is labeled `diff_bpm1X/um` and ranges from -60 to 100. The y-axis ranges from -10000 to 10000.
- diff_bpm4aY**: The x-axis is labeled `diff_bpm4aY/um` and ranges from -30 to 30. The y-axis ranges from -10000 to 10000.
- diff_bpm4eX**: The x-axis is labeled `diff_bpm4eX/um` and ranges from -60 to 100. The y-axis ranges from -10000 to 10000.
- diff_bpm4eY**: The x-axis is labeled `diff_bpm4eY/um` and ranges from -30 to 40. The y-axis ranges from -10000 to 10000.
- diff_bpm12X**: The x-axis is labeled `diff_bpm12X/um` and ranges from -100 to 100. The y-axis ranges from -10000 to 10000.

Each plot displays a dense cloud of points, indicating a large number of measurements. The distributions are roughly elliptical and centered around zero, suggesting that the differences between the BPMs are small and centered around a mean value.
