The figure consists of five scatter plots arranged horizontally, each showing the distribution of a different variable. All plots have a y-axis ranging from -6000 to 6000 with major ticks every 2000 units. The x-axes are labeled as follows:

- diff_bpm4aX**: x-axis ranges from -10 to 10 with major ticks every 5 units.
- diff_bpm4aY**: x-axis ranges from -40 to 30 with major ticks every 10 units.
- diff_bpm4eX**: x-axis ranges from -50 to 50 with major ticks every 10 units.
- diff_bpm4eY**: x-axis ranges from -20 to 20 with major ticks every 10 units.
- diff_bpmE**: x-axis ranges from -30 to 30 with major ticks every 10 units.

In all plots, the data points form a dense, roughly circular cloud centered at the origin (0,0). The density of points is highest in the center and decreases towards the edges of the distribution.
