The figure consists of five scatter plots arranged horizontally, each showing the distribution of differences between BPM4 and other models. The plots are titled: **diff_bpm4aX**, **diff_bpm4aY**, **diff_bpm4eX**, **diff_bpm4eY**, and **diff_bpmE**. Each plot has a y-axis ranging from -1500 to 1500 and an x-axis ranging from -5 to 4 for **diff_bpm4aX**, -40 to 40 for **diff_bpm4aY**, -20 to 20 for **diff_bpm4eX**, -20 to 25 for **diff_bpm4eY**, and -25 to 20 for **diff_bpmE**. The data points are densely clustered around zero, indicating a high degree of agreement between the models.
