The figure displays five scatter plots, each representing the difference between two measurement methods for a specific beam parameter. The plots are arranged horizontally and labeled as follows:

- diff_bpm4aX**: The x-axis ranges from -6 to 6, and the y-axis ranges from -800 to 800. The data points are centered around zero.
- diff_bpm4aY**: The x-axis ranges from -15 to 10, and the y-axis ranges from -800 to 800. The data points are centered around zero.
- diff_bpm4eX**: The x-axis ranges from -40 to 40, and the y-axis ranges from -800 to 800. The data points are centered around zero.
- diff_bpm4eY**: The x-axis ranges from -10 to 10, and the y-axis ranges from -800 to 800. The data points are centered around zero.
- diff_bpmE**: The x-axis ranges from -30 to 30, and the y-axis ranges from -800 to 800. The data points are centered around zero.

In all plots, the y-axis represents the difference between the two measurement methods, and the x-axis represents the parameter being measured. The dense cloud of points centered around zero indicates a high level of agreement between the two methods.
