The figure displays five scatter plots, each representing a different variable. The y-axis for all plots ranges from 0 to 30,000. The x-axis for each plot is labeled as follows:

- diff_bpm4aX**: x-axis ranges from -6 to 6.
- diff_bpm4aY**: x-axis ranges from -10 to 10.
- diff_bpm4eX**: x-axis ranges from -40 to 40.
- diff_bpm4eY**: x-axis ranges from -10 to 10.
- diff_bpmE**: x-axis ranges from -100 to 100.

The distributions are roughly circular or elliptical, centered around zero. The density of points is highest in the center and decreases towards the edges. The **diff_bpmE** plot shows a more elongated distribution compared to the others.
